jahidhasan018

jahid018

Dhaka, Bangladesh

jahiddev.com

Full-Stack Web Developer with 8+ years of experience building custom themes, plugins, Gutenberg blocks, WooCommerce solutions, and headless WordPress applications, along with e-commerce and content sites on Shopify, React, and Next.js. Strong expertise in PHP, WordPress architecture, REST APIs, MySQL/MariaDB, and Git-based development. Recent work includes a quotation system plugin with Google Maps and Places API integration, and a full Next.js platform with an admin dashboard for a tax law knowledge site. I use AI-assisted coding on a consistent basis — leaning on it for architecture decisions and writing code, but always steering it with context rather than letting it run on autopilot. Comfortable taking a project from planning all the way through launch.

## CAREER HIGHLIGHTS

- Delivered production work for direct clients in the US, Germany, and South Africa, plus **500+ freelance projects** for clients across many countries via Fiverr and Upwork.
- Active open-source contributor to **Paid Memberships Pro**, with **7 merged** pull requests improving core plugin functionality.
- Built **AI-assisted development** into daily practice — using AI for architecture decisions and code generation with deliberate context and token-efficiency discipline, not blind acceptance.
- Range spans classic WordPress/PHP work to modern headless builds (Next.js, React, Supabase, Vercel) — comfortable across the full CMS-to-JAMstack spectrum.

## PROFESSIONAL EXPERIENCE

### Full Stack Web Developer | WordPress & Shopify

Dec 2025 – Aug 2026

#### Bright Development

(Remote & Contract) Brooklyn, New York

- Deliver a confidential enterprise WordPress platform end-to-end, from architecture planning through implementation, with scalable CMS structure and reusable content systems.
- Developed enterprise WordPress and Shopify websites from Figma using modular PHP architecture, Liquid, SCSS, JavaScript, and reusable components.
- Built custom Shopify Features and Flow trigger to auto-update product metadata on stock changes.
- Maintained and optimized multiple WordPress and Shopify sites, resolving technical issues and shipping ongoing improvements.
- Managed GitHub Actions CI/CD workflows for reliable, consistent deployments.
- Collaborate with designers and engineering teams on performance, accessibility, maintainability & implementation.
- Collaborated under a project manager using ClickUp for task management and Discord for team communication.

### Full Stack WordPress Developer | Elementor Pro

Apr 2025 – Dec 2025

#### DIMAR.de

(Remote & Contract) Wiesbaden, Germany

- Developed multiple WooCommerce storefronts from the ground up, integrating custom product filtering, dynamic product queries, and optimized storefront experiences.
- Increased Lighthouse scores from 70–75 to 85–95+ through technical performance optimization.
- Reduced WooCommerce cart abandonment from 18% to ~12–13% (~30% improvement) via checkout-flow optimization.
- Strengthened GDPR compliance through secure data handling, cookie consent, and form validation.
- Managed multiple concurrent client projects while maintaining delivery schedules and code quality.
- Transformed multiple Figma designs into pixel-perfect, fully responsive websites using Elementor Pro.

### Full-Stack WordPress Developer

Jun 2024 – May 2025

#### Binary Fabric

(Remote & Contract) Los Angeles, California

- Delivered enterprise WordPress websites from Figma using modular PHP, SCSS, Tailwind CSS, JavaScript, and reusable components.
- Developed a custom WooCommerce theme and built the WooFreight shipping cost calculation plugin, integrating carrier APIs to provide dynamic, real-time shipping rates based on order details.
- Built custom Elementor plugins for pricing tables and a product-page FAQs plugin, giving clients flexible, no-code control over both.
- Design scalable CMS architectures using Advanced Custom Fields and reusable template systems.
- Manage GitHub Actions CI/CD workflows to support reliable deployments.
- Reviewed and tested pull requests from other developers to maintain code quality and consistency across the platform.

**Advance Pools SA****(Remote & Contract) Cape Town, South Africa**

- Built an automated quotation platform integrating Google Maps, Places Autocomplete, Distance Matrix APIs, and WhatsApp Business API (via Wati), cutting manual processing time by ~80%.
- Built role-based frontend dashboards for sales staff and pool builders, plus automated PDF quote generation with pricing details emailed directly to customers.
- Improved website performance by 60%, achieving PageSpeed scores above 90 through caching, database query, and asset optimization.
- Built scalable plugin architecture using PHP 8+, object-oriented programming, SOLID principles, and reusable components.
- Developed automated pricing and installer-matching functionality.

**Full-Stack WordPress Developer | Freelance**

2018 – 2023

**Fiverr & Upwork****Remote**

- Delivered 500+ freelance web development projects for international clients through Fiverr and Upwork.
- Built several full-featured membership websites with payment gateway integrations and membership-based content access, along with LMS platforms, WooCommerce shops
- Built and customized websites and solutions to client requirements, troubleshooting and technical implementation.
- Developed the foundation in remote client communication, project scoping, and independent delivery that carried into later contract work.

**CORE COMPETENCIES**

- **CMS & E-Commerce:** WordPress • WooCommerce • Advanced Custom Fields • Gutenberg • WordPress Block Editor • Headless WordPress • Shopify • Wix
- **Frontend & Frameworks:** React • Next.js • Gutenberg Blocks • Tailwind CSS • Bootstrap • SCSS • JavaScript • TypeScript
- **Backend & Languages:** PHP (OOP • SOLID Principles) • Node.js • Laravel • MySQL / MariaDB • Supabase
- **Systems & Integrations:** REST APIs • GraphQL • WordPress APIs • CRM/ERP-style Integrations • Google Maps & Places APIs • Payment Gateway Integration • API Architecture
- **Performance & Optimization:** Lighthouse • PageSpeed • Caching • Database Optimization • Image Optimization • Lazy Loading • Code Splitting
- **AI & Automation:** OpenAI API • Claude API • Google Gemini API • AI-Powered Content Automation
- **DevOps, Testing & Tools:** Git • GitHub • GitHub Actions (CI/CD) • Docker • Composer • Postman • PHPUnit • Playwright
- **Collaboration:** Slack • Discord • ClickUp • Trello • Notion • Agile/Sprint-based Delivery

**SELECTED PROJECTS**

- Members Forge | WordPress Membership Plugin – [Project Link](#)
- Pools Quotation System | Automated WordPress Quotation Platform – [Project Link](#)
- Space Tech Priorities | Enterprise WordPress Platform – [Case Study](#)
